

Arboriculturist (Tree) Reports

An Arboricultural Report may be requested when there is concern that the roots of a tree or vegetation in close proximity of a property may be affecting, or may present a risk of affecting, the property's structural stability.

In order to assess the degree of risk it is essential to confirm:

- The exact species of the tree / vegetation.
- The distance of the tree / vegetation from the property.
- The depth of the foundations.
- The nature of the soil / clay to determine 'shrinkage potential'.

Upon collation of all of this information a professional decision can be made to determine the likelihood of the property suffering any damage as a result of the tree / vegetation.

Brewsters can arrange for reports to be prepared in accordance with NHBC standards.

Key Features

- Cost Effective – a full service of specialist expertise from one company
- Focus on reduction in elapsed time resulting in reduced costs
- Quality Service – compliance and quality, focusing on 'treating customers fairly'
- Reporting & I.T. – all projects electronically tracked
- Client portal giving real time job status and account management information
- National Coverage
